

A new concept to sell fast food really fast !

Thanks to its unique system with 8 individual hot or cold compartments, filled from the kitchen behind, the vending machine turns itself into another employee !

Stainless steel furniture:

All stainless steel dispensers are equipped with extra thick 8mm scratch-resistant safety glass, in combination with solid shutter and hinge mechanisms, all of this ensures that the machines are virtually impervious to vandalism and wear

Payment Systems:

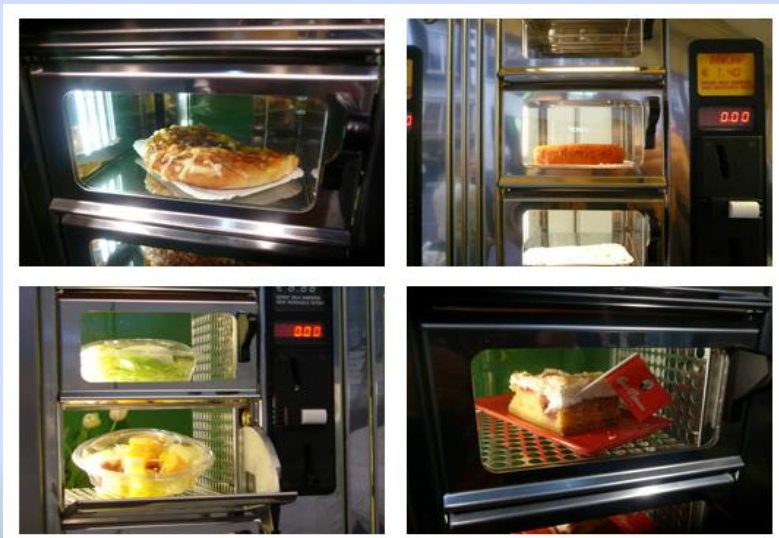

- Default Currency System (Banknote or Coin)
- Token system for other currencies, such as tokens and all foreign currencies
- OV card (touch-on system)
- Credit System (paywave / paypass, visa, eftpos)
- Mobile payments using NFC application

Data:

ADM has developed a new data system, in which revenues and control data are visible via communication through your PC.

TCS:

Ensuring your product is at it's best !

TCS (Temperature Control System and Time)

The latest electronic development with some interesting advantages:

- You can continuously monitor the lifetime of your products using the innovative control system.
- The system records the residence time of the product in each individual pocket.
- The temperature control system ensures that the temperature at the same level in each box. So no problems with temperature fluctuations.

How does it work?

The system uses an LED next to each box. The system has three phases:

- Phase 1: The light is green when you place a product in the box. The time you set fresh starts.
- Phase 2: The light turns red when the backup start time.
- Phase 3: The light blinks red as a warning that the residence time of the product has expired. (The time of the TCS is adjustable up to 3 hours per subject during all three phases)

if you want more information about the T-Control System? please contact us.
